JOHEL VENEGAS

Backend Developer | C# .NET & Azure

Costa Rica | johelvf506@gmail.com | (+506) 7022-6553 | LinkedIn: Johel Venegas | github.com/Johel506

SUMMARY

Backend Developer at S-COM, an IT consultancy serving major banks in Costa Rica, focused on C# .NET 8/10, cloud-native microservices on Azure and the modernization of legacy banking systems. Experienced in building REST APIs and microservices with Dapr, containerizing with Docker and deploying to Azure Kubernetes Service through GitHub Actions CI/CD pipelines. Currently working on the incremental migration of a legacy ASP.NET banking application to .NET 10 while supporting production incidents and business-critical logic. Microsoft Certified Azure Administrator Associate, strong communicator in English and motivated to grow in collaborative engineering environments.

SKILLS

Languages & Databases: C#, SQL (SQL Server, Oracle PL/SQL, PostgreSQL, MySQL), Java, Python, Bash

Backend & Architecture: ASP.NET Core (.NET 8 / .NET 10), ASP.NET MVC, REST APIs, Microservices, Dapr, YARP, Strangler Fig pattern, EF Core, Dapper, Polly, JWT/OAuth

Cloud & DevOps: Azure (AKS, APIM, Entra ID, Key Vault, Application Insights), Docker, GitHub Actions (CI/CD), Git, AWS (EC2, S3, IAM), Nginx, Linux

Frontend & Reporting: Razor, JavaScript, jQuery, DataTables, SSRS

Other Frameworks: FastAPI, Spring Boot, Jakarta EE

Tools: Postman, Grafana, XML/XSD

WORK EXPERIENCE

S-COM Dec 2025 – Present

Backend Developer · IT consulting for the banking sector

Banco Popular y de Desarrollo Comunal Jul 2026 – Present

- Migrating a legacy ASP.NET MVC/WebForms banking application to .NET 10 incrementally, using the Strangler Fig pattern with YARP as reverse proxy so legacy and modernized modules coexist and are released screen by screen without service interruption.
- Implemented a shared authentication bridge that keeps a single user session across the legacy and the modernized application.
- Attend production incidents and defects on an employer agreements and payroll-deduction system integrated with the bank's core banking platform, from root-cause analysis to the fix across stored procedures, business logic and UI.
- Develop and maintain business logic for loan collections, employer agreements and payment inconsistency handling on SQL Server.
- Document the current behavior of each legacy module before migrating it and validate functional parity across development, UAT and production environments.
- Defined, together with the team, the frontend standard for data grids adopted across all migrated screens.
- Built a proof of concept for SSRS reporting on .NET 10.

Banco Nacional de Costa Rica Dec 2025 – Jul 2026

- Designed and implemented atomic microservices and orchestrator services using C# .NET 8 / .NET 10.
- Designed data access layers for multi-database architectures, integrating SQL Server through EF Core and Oracle through Dapper for complex stored procedures with multiple result sets.
- Configured and used Dapr for service-to-service communication and integration.
- Implemented resilience patterns (retry, circuit breaker) with Polly to improve fault tolerance across distributed service calls.
- Containerized services with Docker and deployed them to Azure Kubernetes Service (AKS) through CI/CD pipelines in GitHub Actions.
- Exposed and managed APIs through Azure API Management (APIM).
- Ensured production readiness through active monitoring with Application Insights telemetry.

Freelance Nov 2024 – Apr 2026

Backend Developer · Electronic Invoicing API for Costa Rica (v4.4)

- Architected a RESTful API compliant with the electronic invoicing requirements of Costa Rica's Ministry of Finance.
- Implemented a tax calculation engine with CABYS validation and a secure P12 certificate signing system.
- Built a multi-tenant architecture with RBAC, contingency mode and automated submissions to the Ministry's API.
- Automated request and response validation to guarantee integration reliability.
- Developed a reporting dashboard with tax calculations and automated processing of purchase receipts.

Tech: Python, FastAPI, PostgreSQL, Redis, Celery, Docker, Nginx, JWT, XML/XSD, Cryptography

Credecoop R.L. Jan 2025 – May 2025

Software Developer

- Migrated legacy Oracle Forms applications to a modern Java-based architecture.
- Optimized SQL queries to improve system performance.
- Designed and implemented new database modules and ETL transformations using PL/SQL.
- Collaborated with stakeholders to ensure data consistency and seamless integration across modules.

CERTIFICATIONS

- Microsoft Certified: Azure Administrator Associate (AZ-104)
- Microsoft Certified: Azure Solutions Architect Expert (AZ-305) – Exam scheduled, Oct 2026
- Microsoft Certified: DevOps Engineer Expert (AZ-400) – Exam scheduled, Nov 2026
- Microsoft Certified: Azure Fundamentals (AZ-900)
- DevOps Essentials Professional Certification (DEPC)
- Scrum Foundation Professional Certification (SFPC)
- Cisco Networking Academy – CCNA: Introduction to Networks

EDUCATION

Universidad Latina de Costa Rica Jan 2022 – Aug 2025

Bachelor's Degree in Systems Engineering

LANGUAGES

Spanish (Native) | English (Professional working proficiency)
